Subject: flu stats update

- 37 cadets currently in isolation for Influenza-Like Illness (ILI) – from a high of 121 cadets on 12July.
- 134 total cadets have been released from isolation and returned to duty – aka 17 more since yesterday.
- 103 cadets have tested positive for H1N1. This is the same number as yesterday.
- New cases of ILI are in the single digits now, and have been in the single digits since Monday (6/3/6/4, respectively). We have zero cases today, but that's only through noon, so it's still a bit premature. Key thing here is :We're on the downward trend with single digits in, double digits out, and fewer total cadets in isolation.
